

# AI Triage & First-Response Layer for Logistics Support Inbox

## Quote Q-158193

We will deploy an LLM-driven triage and first-response layer in front of your Zendesk inbox that resolves your four high-volume question types — shipment status, delivery-address change, invoice reissue, and damage claims — by querying your live shipment API and grounding its replies in current tracking data, while routing everything else to your human agents with a structured summary attached. The engagement is split: a focused 6-week pilot on the “where is my shipment” case so you can measure deflection and AHT impact on production traffic before committing, followed by a separately scoped full rollout of the remaining three cases plus hardening, monitoring, and team handoff.

## Scope

- Phase 1 — Pilot (6 weeks, cap \$25,000): joint discovery & integration-design workshop; current-state mapping of Zendesk, shipment API, and support workflow; success metrics and pilot acceptance criteria; Zendesk inbound/outbound integration with ticket threading, email drafting, and agent-side visibility; secure read-only connector to shipment API with response-schema normalization, short-TTL cache, fault-tolerant retries, and PII-safe logging; LLM intent classifier plus grounded “where is my shipment” first-response generator with retrieval over live tracking data, hallucination guardrails, and refusal rules; confidence-gated auto-reply vs. human escalation with structured summary attachment and queue prioritization; pilot analytics dashboard tracking deflection rate, AHT delta, escalation accuracy, CSAT proxy, and cost-per-resolution; UAT support, pilot go-live, and 2 weeks of live-traffic stabilization and threshold tuning.
- Phase 2 — Full build (separate SOW, begins only after pilot review): delivery-address-change automation with intent + slot-filling against the OMS endpoint, write-back confirmation flow, and multi-step confirmation handling for ambiguous cases; invoice-copy automation against the billing API or PDF store with follow-up handling for unresolved lookups; damage-claim intake with structured form capture from email, photo attachment handling, validation against policy rules, and ticket handoff to the claims team; unified escalation routing, structured logging, observability, cost and latency guardrails, on-call alerting, and weekly performance review; runbooks, agent training, and enablement materials for your 40-person support org; a 4-week optimization sprint against labeled production traffic.

## Line items

|                                                                                                                                                                                         |             |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| Phase 1 — Discovery workshop, current-state mapping, integration architecture, success metrics, and pilot acceptance criteria (12 × USD 200.00)                                         | USD 2400.00 |
| Phase 1 — Zendesk integration: inbound email fetch via webhooks, ticket threading, outbound email drafting through Zendesk API, agent-side status visibility (25 × USD 200.00)          | USD 5000.00 |
| Phase 1 — Secure shipment-API connector: read adapter, response-schema normalization, short-TTL cache, fault-tolerant retries, PII-safe logging (18 × USD 200.00)                       | USD 3600.00 |
| Phase 1 — AI agent: intent classifier + grounded “where is my shipment” responder with retrieval over live tracking data, hallucination guardrails, and refusal rules (32 × USD 200.00) | USD 6400.00 |
| Phase 1 — Confidence-gated auto-reply vs. human escalation with structured summary attachment and queue prioritization (15 × USD 200.00)                                                | USD 3000.00 |

|                                                                                                                                                                                           |                     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| Phase 1 — Pilot analytics dashboard: deflection rate, AHT delta, escalation accuracy, CSAT proxy, cost-per-resolution (12 × USD 200.00)                                                   | USD 2400.00         |
| Phase 1 — UAT support, pilot go-live, and 2 weeks of live-traffic stabilization and threshold tuning (10 × USD 200.00)                                                                    | USD 2000.00         |
| Phase 2 — Delivery-address-change automation: intent + slot-filling against OMS endpoint, write-back confirmation, multi-step confirmation workflow for ambiguous cases (35 × USD 200.00) | USD 7000.00         |
| Phase 2 — Invoice-copy automation: secure lookup against billing API or PDF store, PDF generation and forwarding, follow-up handling for unresolved cases (22 × USD 200.00)               | USD 4400.00         |
| Phase 2 — Damage-claim intake: structured form capture from email, photo attachment handling, validation against policy rules, ticket handoff to claims team (30 × USD 200.00)            | USD 6000.00         |
| Phase 2 — Unified escalation routing, logging, observability, cost and latency guardrails, on-call alerting (22 × USD 200.00)                                                             | USD 4400.00         |
| Phase 2 — Runbooks, agent training, enablement, and 4-week optimization sprint against labeled production traffic (26 × USD 200.00)                                                       | USD 5200.00         |
| Subtotal                                                                                                                                                                                  | USD 51800.00        |
| <b>Total</b>                                                                                                                                                                              | <b>USD 51800.00</b> |

## Terms

Proposal valid 30 days from issue. Phase 1 (pilot) billed 50% on kickoff (week 0) and 50% on pilot go-live (week 6); Phase 1 hard cap of \$25,000 as specified. Phase 2 begins only after a pilot review meeting and a signed Change Order / SOW; billed monthly against time-and-materials at the rates shown above. Rates held for a 6-month engagement window and revisited thereafter. Excludes customer-side procurement, third-party SaaS fees beyond our own tooling, and customer IT time required for shipment-API firewall, SSO, or vendor-access changes. Annual support and managed-hosting options available on request.
